Violin: kernel density of FI among FI-eligible participants aged ≥ 60 years (width-scaled). Box: median and interquartile range; whiskers omitted for clarity. Numeric labels give the cohort median. Event rate = four-year all-cause mortality in the complete-case analytic sample. All cohorts satisfied the Searle submaximal limit (FI max = 1.0). MHAS used 27/41 cohort-available stems under a cohort-specific 80% threshold; all other
