

Violin: kernel density of the frailty index among FI-eligible participants aged 60 years and over, scaled to equal width.

Box: median and interquartile range, with whiskers suppressed so that the density shape stays legible.

Numeric label gives the cohort median. All cohorts satisfied the Searle submaximal limit (FI maximum  $\leq 1.0$ ).

MHAS used 27 of 41 cohort-available items under a cohort-specific 80% threshold; all other cohorts used 41 of 41.
